

INSTRUCTIONS FOR USE

ECC-O-bag

Water bag for tree irrigation
suitable for watering (young) trees

1. Preparation

Place the ECC-O-bag around the trunk of the tree (up to 30 cm in circumference). If the circumference of the trunk is larger, you can attach several bags.

2. Zippers

Then carefully close the zipper(s).

3. Fill with water

First fill the ECC-O-bag with 10 litres of water (1/6) and then lift the bag briefly by the black loops. This is important so that the water cannot flow out of the bag. Then fill the bag completely. Only use clean water. Dirt particles can clog the water holes in the tree bag.

volume 75 l water.
